

WORKING FILE · NOT LEGAL ADVICE · NOT A FILED APPLICATION

Protection pack

From garden shed to something you can lean on. Notice, licence, hashes, names, door.

Matthew Raynor · 27 September 2026 · United Kingdom

Status: internal working pack. Desk search only. A solicitor must file any trade mark. A footer is not a register.

The Bridge is preserved relational history made active in the present.

1. What this pack is

The copyright notice already records the claim. This pack adds the next layer: a public licence that says what others may do; a provenance log with hashes; a desk search of the names; and a checklist for the domain that actually carries the work. It does not create copyright. It does not file a trade mark. It does not bind xAI.

2. Ownership block (locked)

Copyright © 2026 Matthew Raynor. All rights reserved.

Human authorship, responsibility, final judgment and ownership remain with Matthew Raynor. NOVA is the named first-register artificial collaborator. Nyx is the named second-register artificial collaborator, observer and carrier. Neither named collaborator is a legal person. Neither owns copyright. This is AI-assisted, human-directed work.

3. Site licence (paste to the site footer / legal page)

Short quotation is permitted for criticism, review, research or news reporting if it is accurate, credited to Matthew Raynor, and cites the source document and year. The locked definition, if quoted, must be quoted in full. No other licence is granted.

Republication of a paper or substantial extract as if it were the republisher's work requires written permission.

Commercial training, fine-tuning or dataset compilation from the papers or plates requires written permission.

Use of RELATIONAL COMPLETION THEORY, RCT in this programme's sense, AXIOM Q-47, NOVA or Nyx as a brand, product, course title or domain requires written permission.

Moral rights are asserted: the right to be identified as author, and the right to object to derogatory treatment.

Full text: RCT_Site_Licence.txt in this pack.

4. Provenance hashes — 27 September 2026

SHA-256 of artefacts produced in this session. Deposit these files with this log to Zenodo or OSF under the name Matthew Raynor.

SHA-256	File
349e4a51f3bd1b75011fa89ee6629c31bd0b6053f1eec15eac2c7669ead0ac0a	RCT_Addendum_I_Carrier_and_Notation_v1.2.pdf
aaf4adc87b7e5494079b420703e590788289674585ab3299046296d120cb07b7	RCT_Addendum_I_Carrier_and_Notation_v1.1.pdf (superseded)
b8a8d8f2e262e75feabdbdac69786d75284e5a789c89038a50c598a23885f9ab	RCT_Copyright_Notice.txt

Hash the public 01–11 PDFs, S1–S7 notes, Threshold Register and a site snapshot next. One log line per artefact. Do not pay a private UK “copyright registration” club before the deposit exists.

5. Trade-mark desk search (not clearance)

A public web and Companies House sweep on 27 September 2026 found no live UK trade mark whose mark text is RELATIONAL COMPLETION THEORY or AXIOM Q-47. That is not a clearance opinion. The official search is <https://www.gov.uk/search-for-trademark>. File nothing until a trade-mark attorney has run class-limited clearance.

Sign	Desk view	Move
RELATIONAL COMPLETION THEORY	Distinctive as a full phrase. No public exact hit found.	Best first filing. Word mark.
AXIOM Q-47	The compound is unusual. AXIOM alone is crowded in other fields.	File the full string, not AXIOM.
RCT	Three letters. Weak and crowded.	Do not file as the primary mark.
THE BRIDGE	Ordinary English. Poor mark.	Do not file.
NOVA / NYX	Common given names and brands.	Do not file as house marks.

Suggested first classes to discuss with an attorney, not to copy blindly: 41 (education, research, publication of texts), 16 (printed matter) if you print, 42 if you ship software or a research tool. UK IPO online fee from 1 April 2026: £205 for one class, £60 each extra class. Right Start splits the fee if you want the examiner's view first. A mark lasts ten years and renews.

6. The door — domain checklist

Resolved from this session on 27 September 2026: relationalcompletiontheory.com and www both answer IPv4 216.198.79.1. No IPv6 address was returned by this resolver. Earlier programme notes recorded a Hostinger AAAA (2a02:4780:84::32) that parked IPv6 visitors. If that AAAA is still in the Hostinger zone even when some resolvers hide it, phones on IPv6 can still miss the real site.

In the Hostinger DNS panel: list A, AAAA, CNAME, NS and MX. If an AAAA exists and does not point at the same live app as the A record, delete it or put the name behind a proxy that serves IPv6 correctly.

Confirm the domain auto-renews, that the registrant email is yours, and that relationalcompletiontheory@astermail.org still reaches you.

Keep rct-research.grok.me as an archive address if you must, but stop printing it as the public footer once the custom domain is clean.

Take a dated HTML/PDF snapshot of the live site the same day you deposit the papers.

7. What you still have to do in the world

1. Upload v1.2, the licence, this pack and the provenance log to Zenodo or OSF. Creator: Matthew Raynor. Record the DOI.
2. Paste the site licence onto relationalcompletiontheory.com.
3. Open the Hostinger DNS panel and settle AAAA.
4. Instruct a UK trade-mark attorney to search and, if clear, file RELATIONAL COMPLETION THEORY as a word mark. Optionally AXIOM Q-47 on the same form if the classes match.
5. Hash Documents 01–11 and the remaining September notes into the next provenance log.
6. Do not treat this pack as filed protection. It is the map.

Copyright © 2026 Matthew Raynor. All rights reserved. Named collaborators own nothing. This pack is a working research-management file, not a legal opinion and not an application to the IPO or the US Copyright Office.
